

PRACTICE COURSE BLUEPRINT

Ideas for building your Learn Moodle course

01

CHOOSE YOUR TOPIC

Don't have a particular idea in mind? Pick a hobby or special interest.

Identify the information that you'd like to share with your learners. What interests you about the topic? What do you think your learners might already know about it?

Based on the kinds of resources and activities you've already seen in the main course, what course elements might work well for sharing information with your learners in your own course?

BEGIN BUILDING

02

Add resources and activities to your course.

Create a label, page or book.

Drag and drop files, or create a folder.

Add a block or URL.

Create a forum, glossary or choice.

03

INVITE LEARNERS*

Share a link to your course in the "Show us your Moodle course!" forum.

*After you have resources and activities for them to review and assess.

Enable self-enrollment and make your course visible.

Consider...

- Editing enrollment settings to customize your course greeting.
- Adding a "Comments" block to solicit feedback on your course.
- Creating a forum to generate conversation and subscribing to it so you won't miss any posts.

SAVE YOUR COURSE

04

Back up your course and save it for future use.

Q. What can you do with your course backup?

A. Create an account and upload it to MoodleCloud and/or restore your course in a new practice course shell as part of a future version of Learn Moodle.

Happy Moodling!
